SECTION 5: COMMUNITY ASPIRATIONS

SECTION 6: REFERENCES

Annex: Maps and other Supporting Information relevant to Policies on Biodiversity and the Natural Environment.
The Sutton Poyntz Neighbourhood Plan has taken over two years to produce and directly involved over 40 villagers as well as drawing on the input of several hundred members of the community with feedback through surveys, public meetings and informal gatherings. Those who consult, employ, manage or monitor this plan are strongly urged to read the associated Sutton Poyntz Place Appraisal (available on the village website) to understand the nature and character of the village and the values, aspirations and concerns of the community that underpin each policy.

We have endeavoured throughout the neighbourhood planning process to engage with stakeholders through an iterative and inclusive process. This has proved highly beneficial in helping to understand different perspectives and to build stronger relationships for the future. Several householders and landowners have argued that their rights will be compromised by some of the proposed policies. It has proved challenging to find the right balance between allowing the community to shape the future development of their village and allowing individuals and organisations to manage their property, land and businesses as they wish. The Consultation Statement accompanying this document records the extensive and exhaustive efforts we have taken to solicit and listen to individual views. It does not hide the disagreements that have arisen but it does demonstrate the effort expended to find common ground and to develop a Neighbourhood Plan that will gain wide acceptance.

The policies and aspirations contained in this plan have been refined through debate, research, consultation and feedback. The Steering Group has not been shy about moderating proposals where these have proved impractical, ignored national legislation or duplicated existing local policies. We have been responsive where criticism has arisen. We have also encouraged individuals, who have been energised by these conversations, to join the Steering Group, or one of its Sub-Groups, to ensure the widest possible engagement with the community. In developing individual policies, we have been open-minded about future development and conscious that Sutton Poyntz must play its part in meeting local and national housing needs. At the forefront of our mind, however, has been the desire to create a stronger community that is a better place to live and where development adds to the village character, does not detract from the environment, provides recreation facilities, and allows more people to work locally and where traffic and parking concerns are better managed.

Peter Dye
Chair
Sutton Poyntz Neighbourhood Plan Steering Group
SECTION 1: ABOUT THE NEIGHBOURHOOD PLAN

1.1 Origins and Purpose
The possibility of creating a Neighbourhood Plan for the village of Sutton Poyntz was first discussed in 2010 by the Sutton Poyntz Society, even before the Localism Act became law, but the absence of parish status meant that there were several barriers to progress. However, following discussions with Borough Council officers, the Sutton Poyntz Society applied for and succeeded in gaining recognition as a non-parish Neighbourhood Forum by the Weymouth and Portland Borough Council in early 2016 and consequently became responsible for consulting with all stakeholders and preparing the Neighbourhood Plan for Sutton Poyntz.

A Steering Group consisting of both members and non-members of the Sutton Poyntz Society was formed in May 2016 following a call for volunteers in a community-wide Newsletter (Newsletter No.1). The Steering Group was directed to operate within the Terms of Reference produced by the Neighbourhood Forum and to provide a structure for the project, promote consultation with all stakeholders within the Neighbourhood Area, collate information with a view to forming draft policies and aspirations and to facilitate the successful delivery of a draft Neighbourhood Plan.

As part of the early development of a Neighbourhood Plan, the Steering Group agreed to establish a sub-group which was given the specific task of producing a Place Appraisal. This was published as a draft ‘living document’ in November 2017 and formed a major part of the Stage Two public consultation process undertaken in the period December 2017 to January 2018. Feedback received was given careful consideration and incorporated into a revised document. The Place Appraisal has been continuously reviewed throughout the Sutton Poyntz Neighbourhood Plan.

The Neighbourhood Plan policies were developed by six sub-groups (Biodiversity and the Natural Environment; Employment, Business and Tourism including IT and Communications; Heritage; Housing and Planning; Sports and Recreation and Transport) based upon research and evidence collection as well as feedback from public consultation. The final Plan when ‘made’ will form part of the development plan for the area alongside the Council’s Local Plan and must be taken into consideration during future planning decisions by the Local Authority.

1.2 What the Neighbourhood Plan Affects
The Neighbourhood Plan is restricted in terms of policy to those matters affecting land use and development. The plan does however also promote aspirations that the community have expressed a desire to progress and these can be actioned outside of the scope of planning policy through various public bodies, third parties and community stakeholder co-operation.

1.3 What Area the Plan Covers and How this was Derived
The proposal to produce a Neighbourhood Plan and consultation on the area to be covered was publicised in a community newsletter in February 2016 and following representations from some residents the Neighbourhood Area was amended to include additional properties which had been previously excluded from the area.

To meet statutory requirements, the draft Neighbourhood Forum and Neighbourhood Plan Area Application was submitted to Weymouth and Portland Borough Council on
27 May 2016. The formal consultation period ran from 10 June to 5 August 2016 during which period there was extensive publicity and an opportunity for objections or concerns to be formally raised. A total of eight representations were received. However, these did not constitute grounds for further amendment or rejection of the proposals and formal approval was given on 20th September 2016 by the Weymouth and Portland Borough Council. This resulted in the following Neighbourhood Area being defined (Map 1)

1.4 How Long the Plan Will Last
The plan will last until 2036 by which time it will need to have been reviewed and extended if it is to continue to have validity.

1.5 Who Wrote the Neighbourhood Plan
Community engagement has been central to our activity. The Plan has been developed through extensive consultation with the people of Sutton Poyntz and others with an interest in the area. Details of each consultation have been recorded in the Consultation Statement which is available on the Sutton Poyntz Village Website. The Steering Group established several topic Sub-Groups (see 1.1) to collate evidence, mostly based upon public consultation, and draft detailed policies and aspirations for inclusion in the draft Neighbourhood Plan. Information was made publicly accessible on the Sutton Poyntz Village web site as the process progressed. The final plan was collated and endorsed by the Steering Group in draft form and subjected to a formal six-week public consultation with stakeholders prior to the Plan being modified to take account of the feedback and subsequently submitted to the Local Authority for formal process.

1.6 How Were Stakeholders Consulted.
The following key stages of consultation took place:

- February to May 2016: Proposal for Neighbourhood Area
- October 2016: Stage One Survey to determine vision, objectives and key issues in relation to topic areas
March 2017: Proposals for, and invitation to join, Sub-Groups. The Sub-Groups subsequently met periodically to research and draft the relevant sections for the Neighbourhood Plan.
December 2017 to January 2018: **Stage Two Survey** to help define specific policy outcomes
February to September 2018: Invitation to landowners with land outside the Defined Development Boundary to discuss proposals for future land use.
April to May 2018: Invitation for affected landowners to respond to the independent consultant reports on Local Green Spaces and Key Views
September to October 2018, Strategic Environmental Assessment consultation with statutory bodies
November to December 2018: **Formal Regulation 14 Consultation**

1.7 Management and Monitoring
A successful Neighbourhood Plan requires provision for monitoring and management functions. Management will normally be undertaken by the Local Planning Authority, while the monitoring function traditionally falls to the parish. The Sutton Poyntz Neighbourhood Forum is unique in being a rural non-parish body. Under the local government arrangements in place when the forum was established in 2017, the Weymouth and Portland Borough Council would have managed the Sutton Poyntz Neighbourhood Plan (once made), as part of the West Dorset, Weymouth and Portland Local Plan. It would have been reasonable for the Borough Council to have delegated the monitoring role to the Sutton Poyntz Neighbourhood Forum. However, with the creation of the Unitary Authority on 1 April 2019, the Weymouth and Portland Borough Council will disappear and Sutton Poyntz becomes part of Weymouth Town Council. Since is not possible to have a non-parish forum within a parish, the Neighbourhood Forum will cease to exist with the creation of Weymouth Town Council. At the same time, the West Dorset, Weymouth and Portland Local Plan (incorporating the Sutton Poyntz Neighbourhood Plan) will become the responsibility of the new Unitary Authority.

The Weymouth Town Council may be unable to offer the level of oversight that would have been provided by the Sutton Poyntz Neighbourhood Forum, with its unique knowledge in developing relevant local policies. The Town Council is urged to consider delegating this task to a local organisation. There are two candidates, the Neighbourhood Plan Forum Steering Group or the Sutton Poyntz Society. The former has no constitution, policies or planned existence beyond April 2019. The Sutton Poyntz Society has been in existence for fifty years, but its constitution and policies do not align with the Neighbourhood Plan. The Sutton Poyntz Society could however replace its existing policies by those set out in the Neighbourhood Plan. Consideration should also be given to adopting the associated aspirational goals. In doing so, the Sutton Poyntz Society could properly claim a democratic mandate in championing policies and aspirations formally agreed by the community. A third suggestion is the creation of a Neighbourhood Council that would meet specifically to discharge the monitoring role. Monitoring should also involve **progressing the village’s aspirations and** continued liaison with stakeholders. The engagement with householders, landowners, farmers, developers, businesses and employees during the planning process has proved (in general) positive and beneficial. Even where there has been disagreement, it has led to improved understanding and constructive discussion. This process should not end just because the Neighbourhood Plan has been made.

2.1 ABOUT SUTTON POYNTZ
The village of Sutton Poyntz is situated three miles east of Weymouth and five miles south-east of Dorchester. It is incorporated within the Weymouth and Portland District, but lies just outside the town’s built-up area (represented by Chalbury, Preston and Seven Acres). The village is bounded to the north by Sites of Special Scientific Interest (SSSI), to the north and west by scheduled ancient monuments and is located entirely within an Area of Outstanding Natural Beauty (AONB). It is also protected by a Conservation Area.

2.2 THE PLACE APPRAISAL
The Place Appraisal underpins the Neighbourhood Plan and provides valuable context for the development of the policies within the plan and should be referred to for specific supporting information. A summary of the content of each sub-section is provided below for ease of cross-reference.

Character Area Map M- PAC1
SECTION 3: VISION AND OBJECTIVES

3.1 Vision
By the end of the plan period we want Sutton Poyntz to be somewhere that makes the most of its strengths. It will therefore be a thriving and friendly community, whose residents can enjoy an attractive village centre, can reach nearby shops and facilities, and can easily access the beautiful surrounding countryside.

Issues which otherwise detract from residents’ quality of life will be less evident. By the end of the plan period housing will better suit local needs, any new development will add to the village character, recreation facilities will exist, more people will work locally and traffic or parking concerns will be better managed.

3.2 Summary Objectives

1. Retain and promote housing which meets the needs of residents.

2. Protect the character of the village and its buildings of heritage value.

3. Sustain and improve community facilities and assets which add to residents’ quality of life.

4. Promote safe and accessible transport options for all those travelling from and to the neighbourhood.

5. Promote biodiversity and conserve our natural environment with its wildlife habitats.

6. Retain and enhance important green spaces found in and around the village.

7. Support small-scale opportunities for business and local employment.
SECTION 4: POLICIES

SECTION 4.1 - BIODIVERSITY AND THE NATURAL ENVIRONMENT.

Strategic Objective
To safeguard wildlife and the natural environment by protecting and enhancing habitat and developing connecting pathways that help species to adapt to change by:

- Ensuring that new development does not have a detrimental impact on biodiversity, including UK priority species, and provides a sustainable net gain.
- Designating green spaces which connect to a green corridor and interconnect wherever possible.
- Adopting a pro-active approach to the protection of trees.

Introduction
Situated within an Area of Outstanding Natural Beauty (AONB) and including a designated Site of Special Scientific Interest (SSSI) Sutton Poyntz and the surrounding countryside provides a particularly rich and diverse variety of habitat and wildlife species (1, 6, 7, 9) given the semi-urban location and proximity to human habitation. The River Jordan and its feeder streams form a natural Green Corridor (1) which provides an ideal transit route for aquatic and airborne wildlife while the chalk/gravel bed and the banks support a good variety of flora and fauna. The hedgerows (3), trees and limestone walls that spread out across the surrounding landscape provide important connectivity (2, 12) to other green islands of habitat and are supplemented by the sympathetic planting of pollinator species in many residential gardens. The non-intensive use of adjoining farmland acts as a barrier to pollution from field run-off while the relatively low traffic flow limits airborne emissions. The resulting green infrastructure and distribution of priority wildlife species (4) is represented in Maps BNE 2.1 to 2.3. This may be used as a secondary source of information in support of the primary source of verified data held by Dorset Environmental Records Centre.

The policies and aspirations in this plan seek to address the potential impact of new development on biodiversity and deal specifically with:

- The protection of wildlife habitat through the creation of green corridors, designated green space and the assessment of the impact of new development on biodiversity with a view to both conservation and enhancement.
- The designation of areas of green space that shall be protected from development and destruction of habitat.
- A proactive approach to tree preservation based upon retention wherever possible and replacement with appropriate trees in a suitable nearby location where loss cannot be avoided.

Given the expressed strength of public opinion (11) that biodiversity should be enhanced as well as protected the policies in this plan seek to both underpin and strengthen the provisions of the Local Plan (14) and place these in a local context.
BNE 1 – PROTECTION AND ENHANCEMENT OF WILDLIFE HABITAT IN RELATION TO NEW DEVELOPMENT.

Development proposals that protect or enhance wildlife habitat on-site and along their boundaries will generally be supported.

Development proposals will demonstrate that they have sought to protect existing wildlife habitat and should seek opportunities to enhance wildlife habitat. Where they fail to address wildlife habitat protection, development proposals will not be permitted.

Development will not lead to or cause serious risk of environmental harm to the Green Corridor in Sutton Poyntz which follows the River Jordan and its tributaries (and which is defined on Map M-BNE1 below)

All development proposals for sites which directly adjoin the Green Corridor will be expected to include a Biodiversity Appraisal and Biodiversity Mitigation Plan.

MAP M-BNE1 – Defined Green Corridor

Justification for Policy BNE 1

Biodiversity has been highlighted as one of the things that people feel makes Sutton Poyntz a special place (10) and it has been identified as one of the best recorded areas of Dorset in terms of wildlife (15) largely due to an active local biodiversity group. The public consultation survey of 2017-2018 (10, 11) identified very strong support
for biodiversity conservation and enhancement along with the protection of habitat from inappropriate development through the designation of a Green Corridor and areas of Local Green Space (36). The rationale for the selection of the areas identified within the plan policies is detailed in a separate document (43). It is considered that the overall aims are best achieved through a process of co-operation and collaboration between the various stakeholders underpinned by policies encompassing biodiversity protection and enhancement measures relative to new development. National policy requires that the potential effects of a development on the habitats or species of the Natural Environment and Rural Communities Act 2006 section 41 list (in Biodiversity 2020) must be taken into consideration and a locally derived list is provided (4) as a secondary source to help inform future planning decisions and also to encourage public self-assessment. In support of a policy of enhancement and given the proximity of priority species to potential development within this relatively small Neighbourhood Plan area it is reasonable to extend the application of a Biodiversity Appraisal (15) to proposed developments where the landholding connects with the boundary of the Green Corridor or designated Local Green Spaces, where biodiversity was a reason or part reason for that designation. Such measures will add considerably to the protection of the diverse range of birds, mammals, fish, herptiles and invertebrates (several rare or endangered) that are found in the area as well as their habitat.

Summary of Intent for Policy BNE1
This policy is designed to ensure that wildlife habitat is enhanced as well as protected to help counteract the impact of global climate change. Protection is particularly critical along the Green Corridor to provide free unhindered movement, although of significant wider importance across the entire Neighbourhood Plan area. New developments should wherever possible incorporate wildlife friendly measures such as suitable nesting/roosting sites for declining bird species, bat tiles, hedgehog gaps in fences, planting of indigenous tree and hedge species and of pollinator species in order enhance biodiversity habitat both within the site and along its boundaries. These considerations are likely to become even more important in the future as global warming will impact many aspects of the environment such as average temperature, soil acidity and moisture levels which will mean whole groups of animals and plants will be on the move seeking the conditions that suit them best.

This policy aims to facilitate the maintenance and improvement of designated Local Green Spaces through support to landowners and others in liaison with biodiversity organisations. This would build upon projects such as those carried out by the Sutton Poyntz Biodiversity Group in collaboration with Wessex Water plc and the Garden Bird Watch (16) project.
BNE 2 – LOCAL GREEN SPACES

The sites shown on Map M-BNE2 are designated as Local Green Spaces and afforded additional protection due to their demonstrable value to the local community in terms of their recreation or beauty or wildlife or historic value.

Development will only be considered in the designated areas in very special circumstances where:

a) It is to provide appropriate recreation or public amenity facilities that preserve the openness of the site and do not compromise the site’s designation value; or

b) It is for the replacement or alteration of an existing building and does not result in a significant addition to the footprint or height of the existing building; or

c) It involves the renewal or installation of small-scale and incidental structures which do not detract from the designation purpose.

National Policy Planning Framework (13) paragraphs 99,100,101 apply. Local Plan Policies (14) ENV 3 applies

Justification for Policy BNE 2

The areas identified meet the National Planning Policy Framework (NPPF) criteria (13) for designation of Local Green Space and have been professionally and independently assessed (37) and subject to consultation with affected landowners. Most of these spaces are adjacent to the Green Corridor and in addition to amenity value provide strong interconnectivity for wildlife transit between habitats, particularly priority species (4). Extraction of water from the River Jordan has continued for over 150 years and is a key part of the village heritage; this designation provides an opportunity for the whole community to extend the partnership with Wessex Water and create new partners as we seek to build the green infrastructure together around this natural resource. The supporting rationale for the choice of the sites and their inter-relationship with the green infrastructure and other designated protections within the neighbourhood area is detailed in a separate document (43). Very strong public support exists for the identification of designated Local Green Space within the Neighbourhood Plan area (36).

Summary of Intent for Policy BNE 2

This policy aims to enhance social and environmental benefits by protecting areas of importance to the community in terms of beauty, recreation, wildlife, tranquillity or historic value for both current and future generations and specifically aims to prevent the encroachment of development onto those areas. A primary purpose for many of the designated Local Green Spaces is to secure a buffer zone along the Green Corridor as it passes through developed areas to allow wildlife to move freely along the corridor and provide connectivity to potential habitat in adjacent areas (3, 43). The policy seeks to allow for proportionate development in those special circumstances that would benefit the community, such as for improved recreational facilities, agricultural and horticultural use, or operations related to statutory undertakings, with the condition that they do not compromise the added value of the designation.

The implications of Local Green Space designation are that whilst a site’s development opportunities are restricted, nothing else about the site is altered. In particular, it does not alter who owns or manages a site, who has right of access to a site and it does not preclude incidental site changes that do not require planning permission e.g. erecting a shed or creating a pond (37). Neither does the designation
reflect upon the stewardship of the land and in fact demonstrates the desire of the community to build stronger relationships in support of the continued care of these important and valued areas.

The policy is not intended to impede the operational needs of bodies such as Wessex Water who have statutory duties related to the provision and protection of public water supply and is indeed seen to be complementary to those functions and the organisations’ vision for sustainability (49). Although not a criterion affecting suitability of an area for designation within the NPPF (13), the potential financial impact of Local Green Space designation on land and property values has been quantified and documented (44,45,46).

POLICY BNE 3 – TREE PRESERVATION

Development proposals should retain and protect existing trees and hedges which contribute to the distinctive character (1) of the Neighbourhood Plan area or which contribute biodiversity value to the area.
Where there is no practical alternative to the removal of such a tree it will be replaced with an indigenous species of a type appropriate to the location.

National Policy Planning Framework (13) paragraph 109 applies.
Local Plan Policies (14) ENV 2 and ENV 10 apply

Justification for Policy BNE 3
Strong public support has been demonstrated for the preservation of managed trees and hedges (8, 11, 36). The Neighbourhood Plan area contains several important trees and hedges including veteran trees, historic field boundaries and traditional orchards that are recorded in several sources (1,3,4,7,15 and Map M-BNE 2.2 in Annexe 1).

Summary of Intent for Policy BNE3
Trees and hedges add to the character of the landscape – see trees and hedges subsection for each of the five character areas in section 5 of the Place Appraisal (1). They provide important amenity value and essential wildlife habitat and help to mitigate the effects of climate change. However, inappropriately located and unmanaged trees can present problems such as reduced light or visibility, damage from falling or root growth and fouling of overhead service cables. This policy opposes the unnecessary destruction of trees and hedges caused by land development and gives priority to the preservation of native and locally indigenous species (for example but not limited to Hazel, Ash, Field Maple, Pendunculate Oak, Wayfaring Tree, Crab Apple, Blackthorn and Hawthorn), individual or groups of trees assessed for their amenity value, veteran trees, traditional orchards and those of historical importance. Where there is no alternative to removal the replacement with suitably sited indigenous trees will ensure that the distinctive character of the area is maintained (1) whilst minimising problems associated with natural growth.
SECTION 4.2 - EMPLOYMENT, BUSINESS, TOURISM (INCLUDING INFORMATION TECHNOLOGY & COMMUNICATIONS)

Note: No specific policies have been generated and it is intended to take the following forward as aspirations for the community.

Strategic Objective
To support opportunities for the small-scale development of business and services, local employment and tourism by supporting those home improvements which enable low key home working and encouraging community led projects.

Introduction and Overview
Sutton Poyntz has its origins as a small farming community where employment was primarily based on agriculture and the supporting services and, later, water supply. This theme of community based employment is reflected in the modern day where the Springhead Pub is now the major employer and many people have low key home based businesses such as consultancy, blacksmiths, horticulture and child care.

The community has expressed support for maintaining this type of business (36) which is well suited to what is an otherwise residential location. Sutton Poyntz is also situated close to Weymouth with its wider employment opportunities including those associated with the local tourism industry. The community has identified several aspirations in relation to low key home based employment and the potential for the provision of a small village shop, such as a pop-up facility.

From a tourism perspective, the village remains popular for those visitors seeking solitude away from the hustle and bustle of Weymouth and there is support for the enhancement of the small scale non-commercial tourism that has characterised the village in the recent past (1) in addition to the provision of guided visits (36).

Since the first public consultation (10), telecommunications providers have improved the local infrastructure which has resulted in increased satisfaction levels. In the subsequent public consultation (11,36), 92% of respondents found mobile phone reception to be between variable and excellent, 74% found the speed of their internet to be satisfactory or better and 79% found their internet reliability to be satisfactory or better. Given the focus nationally is to increase speed and reliability in locations where it is poor or non-existent, an aspiration rather than a policy is appropriate.
SECTION 4.3 - GETTING AROUND

Strategic Objective
Promote and develop a safe, accessible, reliable and environmentally friendly transport network by providing a choice of pedestrian and public and private vehicular transport options with emphasis on reducing the impact of car usage.

Introduction
Despite its semi-isolated location, the population of Sutton Poyntz benefits from proximity to the towns of Weymouth and Dorchester for public and private transport links (1). Private motor vehicles are the most popular means of accessing the area and increasingly bring with them road safety concerns, atmospheric pollution, congestion, impaired public service access and erosion of infrastructure. The policies in this plan seek to address these issues relative to future development and deal specifically with:

- Adequate provision of means of safe pedestrian movement that are not detrimental to the character of the area and surroundings.
- Greater off-street parking provision.
- Installation of appropriate facilities to encourage the use of low emission vehicles.
- Measures to alleviate the detrimental impact of increased traffic density on local infrastructure.

Specific community aspirations in relation to public bus services; public footpaths and traffic control are identified in section 5.3 and are to be pursued through the relevant authorities.

POLICY GA1 – TRANSPORT NEEDS AND NEW DEVELOPMENT

Wherever practical any new development that has the potential to generate additional traffic flow should:

GA1.1 Seek to minimise dependency on private car usage.

GA1.2 Apply the hierarchy of road users to identify suitable access routes

GA1.3 Promote the safety of pedestrians and cyclists by providing segregated space which is in keeping with the character of the area and by installing suitable street lighting.

GA1.4 Provide suitable access links to existing pedestrian routes in the area, making it easier to walk to public transport, shops and other services.

Local Plan Policies (14) COM 9 and ENV 11 apply
Justification for Policy GA1
Future development must consider the strong support (10) for ease of access to a maintained network of public footpaths that criss-cross the surrounding countryside and which provide important leisure, amenity and service access for locals and visitors [see 5.3.2]. The desire of the community (11,36) to retain the character of the rural lanes and not incorporate raised pavements into new developments needs to be balanced against the road safety issues arising from an absence of footways on the main access roads and the erosion of public footpaths by motorised traffic (10) such as on Puddledock Lane. In terms of road safety and personal security the community support (36) a policy of incorporating adequate street lighting into all new developments.

Summary of Intent for Policy GA1
The above policy aims to establish a clear order of priority for the safe movement of people in relation to transport options when planning for new development and ensure that the safety and accessibility of people is not compromised. Examples include; damage to public footpaths due to greater post development vehicle intrusion, compromised access of emergency and public service vehicles due to on-street parking, destruction of trees and hedges by excessively sized delivery vehicles, means of access such as steps or steep slopes which are a barrier to the elderly, sick or disabled, absence of accessible short cuts to bus stops and other public rights of way. This approach aligns with the hierarchy of road users as identified in section 6.5.5 of the Local Plan (14).

Consider FIRST
- Pedestrians
- Cyclists
- Equestrians
- Public transport users
- Specialist service vehicles – e.g. emergency services, waste, etc.

Consider LAST
- Other motor traffic
Justification for Policy GA2
Car ownership is relatively high at 89% of households with 46% of households owning at least two vehicles (1). This creates increasing congestion from on-street parking (11, 19, 36) on the narrow access roads, particularly the Sutton Road ‘gateway’ and around the village pond and a policy is needed to ease these pressures. The decline in the village bus service since 2013 from 11 buses per day to the current 3 has resulted in greater use of car transport due to the inconvenient frequency and poor reliability of the service (1, 23). Due to the higher levels of car ownership (18.6% higher than Weymouth (1)) the guidelines for the number of visitor spaces per house in new developments have been adjusted proportionately to a 1:4 ratio as opposed to 1:5 and resident parking space criteria strengthened appropriately (22) to reflect the higher than average levels of multiple vehicle ownership (1). The edge of town location of the Sutton Poyntz beauty spot within an Area of Outstanding Natural Beauty attracts visitors from near and far for leisure and recreation purposes (1) and this creates additional on-street parking congestion around the village centre (11, 19) which is further exacerbated by the volume of traffic visiting the popular Springhead Pub with its limited parking capacity (1). A majority of residents support a car park (11, 36) and the Springhead Pub has recently made arrangements for an adjacent field to be used as a temporary overflow car park, which appears to have been successful. Following consultation with owners of potential sites identified in the public survey (36) it has not been possible to secure a viable location for a permanent car park. A general policy has therefore been incorporated which accounts for the need to ensure that any such car park is of a proportionate size, does not detract from the character of the area (36) or impede traffic movement.

Summary of Intent for Policy GA2
This policy aims to address the concerns associated with increasing on-street traffic congestion including that arising from business expansion where additional visitor parking demand occurs. It aims to reduce the detrimental impact, in terms of amenity

POLICY GA2 - ON-STREET TRAFFIC CONGESTION

GA2.1 All new dwellings having two or more bedrooms will incorporate a minimum of two off-road parking spaces per dwelling and one additional unallocated visitor space for each four homes or part thereof.

GA2.2 Any development will be designed to discourage additional on-street parking on the existing road network, especially near junctions or where the road is narrow.

GA2.3 Proposals to provide an area for off street car parking within the neighbourhood area will be supported, provided that the car park does not exceed one thousand square metres in size, does not detract from the character of the village or its setting and is located so that vehicles using it are unlikely to impede the flow of traffic on adjoining roads.

Local Plan Policy (14) COM 9 applies
and emergency/public service access, of on-street vehicle parking in the narrow lanes by creating greater off-street parking choices which consider aesthetic impact and local character (1) at the design stage.

**POLICY GA3 – IMPACT OF TRAFFIC DENSITY ON CURRENT INFRASTRUCTURE**

GA3.1 The installation of traffic calming and control measures in the vicinity of new development is a priority for use of the Community Infrastructure Levy raised from such development.

GA3.2 Development proposals which seek to mitigate for any significant traffic impacts that are likely to result will be supported.

Local Plan Policies (14) COM 7 and ENV 11 apply*

**Justification for Policy GA3**

Increasing traffic volumes have long been of concern to resident’s (19) and a perceived increase in the speed of through traffic has resulted in calls for a 20mph speed limit in a recent survey (10). Vehicle monitoring data (20) shows that the average speed of vehicles along Plaisters Lane is 20.9 mph with a maximum speed in the region of 35 mph. Although this does not meet the criteria for a more rigorous enforceable speed restriction (24) than the current 30mph limit, other measures need to be considered to address these concerns.

Past residential development has resulted in a detrimental impact on the narrow lanes and footpaths due to erosion by the increased volume, speed and size of vehicular traffic (10, 19).

**Summary of Intent of Policy GA3**

Policy GA3.1 addresses the expressed concerns of the community (10) regarding the speed of vehicles (20) on the narrow lanes that do not have pedestrian footways and the desire to see a reduction in speed through the application of measures that are non-obtrusive (11,19,36) and not detrimental to the sense of place (1).

Policy GA3.2 seeks to introduce measures to mitigate the post development erosion of infrastructure by larger vehicles and increasing traffic flow (19, 20) and expresses support for those development proposals that incorporate mitigating measures to address these issues at the design stage.

The policy also seeks to address the issue of increased traffic size and volumes entering and leaving new development via minor through roads that are progressively unable to cope with such demand during the construction phase.

**POLICY GA 4 – POLLUTION REDUCTION**

New residential units will each be provided with adequate charging facilities for ultra-low emission vehicles.

*National Policy Planning Framework (13) paragraph 110 applies.  
Local Plan Policy (14) COM 9 applies*
Justification for Policy GA4
This policy makes adequate provision at the design stage for electric vehicle charging points to be integrated into vehicle parking spaces in all new build development; a proposal which has received significant majority public support in a recent survey (11, 36). This will help to ensure that new properties are designed ready for the planned switchover from fossil fuel, in line with UK Government policy, as set out in its ‘Road to Zero Strategy’.

Summary of Intent of Policy GA4
The policy addresses the environmental issues associated with pollution from internal combustion engines and aims to promote greater use of low emission vehicles which bring benefits of improved air quality.
SECTION 4.4: HERITAGE

Strategic Objective
To improve understanding of the heritage in and around our village, and thereby:

a) to protect that which is important and lends most to the village’s distinctiveness; and

b) to provide better information to those who live in and visit the village, and to planners.

Introduction
Sutton Poyntz lies in an area extremely rich in prehistory, and has its share of more recent treasures. A working paper (31) has been prepared as background to this Neighbourhood Plan document, building on several sources.

Map 4 in the Place Appraisal (1) is a summary of Listed Buildings (28) and Monuments (26). They comprise four main groups:

- Prehistoric (Bronze and Iron Age) monuments, mostly just outside the Neighbourhood Area, but with the village forming an important part of the view enjoyed by walkers;
- Field systems, boundaries and Lynchets, of a variety of dates;
- The Osmington White Horse celebrating George III’s fondness for Weymouth. This is also just outside the Neighbourhood Area but the village is an important part of the view;
- 12 Listed Buildings of a good variety of types: 2 farmhouses, one range of farm buildings, a mill and mill house, a Victorian waterworks building that houses a rare type of water pump, and a variety of workers’ cottages by the village pond and along Silver Street.

What makes Sutton Poyntz special?

The historic core of the village mainly hugged the right bank of the River Jordan, and contains all the Listed Buildings although other more recent buildings outside the core have heritage significance. This is the area that visitors come to enjoy, but there are some locations that are of particular importance:

- First, there is the pond area, with the header pond for Sutton Mill, several old workers’ cottages on one side, and the village pub and glorious views up the valley on the other side. This is the area that a Borough Chief Planning Officer once called “the jewel in Weymouth’s crown”;
- Silver Street, hugging the bank of the stream south from the pond, is very rare; a line of worker’s and artisanal cottages with no vehicle access, on a footpath that was once a thoroughfare through the village and is now paved by slabs used by students of the stone-mason Eric Morris;
- At the top end of the pond there is a cluster of attractive old workers’ cottages, most combined internally to create larger houses. There is also the Waterworks site with a pair of late 19th C cottages built for senior staff members, the slightly earlier industrial buildings designed by Thomas Hawksley, and a delightful mill house that is more likely 18th C than later.

Several unlisted buildings and built features (27) within the village core are evidently of some age; many of these provide context to the Listed Buildings. Outside the core, there are a scattering of older dwellings that are not listed, as well as a group of 1930’s houses, mainly but not all designed by E Wamsley.
Lewis (founding President of the Weymouth Civic Society), that sought to recreate a rural style using local materials.

**POLICY HE1 – PROTECTING ARCHAEOLOGY**

Development proposals on previously undeveloped land should be accompanied by the results of an archaeological assessment of the development site.

*National Planning Policy Framework (13) paragraphs 128 and 141 apply
Local Plan Policy ENV4 (14) and its preamble applies*

**Justification for Policy HE1**

All of the developed part of the Neighbourhood Area, along with the fields abutting the developed area, lie within an area designated in the Local Plan as of “Archaeological Potential”; the current Local Plan ((14) paragraph 2.3.8) states that an archaeological assessment “may be required” for development in such areas. Given that the developed area of Sutton Poyntz is closely ringed by ‘Monuments’ listed in the Dorset Historic Environment Record (see map M-HE1), an archaeological assessment should be the norm. This would provide a policy that is closely aligned with NPPF paragraph 128.

**Summary of Intent for Policy HE1**

This Policy is intended to ensure that important archaeology is not destroyed unwittingly, and that less important heritage can be identified and recorded before it is destroyed.

Map M-HE1 - Extract from Dorset Explorer map (29) showing known 'Monuments' around village centre
POLICY HE2 – LOCALLY IMPORTANT HERITAGE ASSETS

Locally Important Heritage Assets will be protected as specified in the Local Plan. A list of such assets will be developed for the Sutton Poyntz Neighbourhood Plan area.

National Planning Policy Framework (13) paragraphs 129 to 141 apply. Local Plan Policy ENV4 (14) and preamble applies

Justification for Policy HE2

The NPPF recognises the importance to local communities of buildings that are not of sufficient importance to merit Listing, but nevertheless contribute importantly to their own locality. The current Local Plan also recognises the need to protect locally important heritage assets, particularly where they contribute to an area’s distinctiveness; the Local Plan encourages local communities to work to identify such locally important heritage assets. Conservation Area appraisals for villages in West Dorset (such as Osmington) and for Weymouth Town already contain such lists, but this has not been done yet for the outer areas of Weymouth. This Policy would bring the Sutton Poyntz Conservation Area up to the better practice well established elsewhere in Dorset.

Sutton Poyntz contains many unlisted buildings that appear to be of significant age, as well as groups of buildings that provide important context to the Listed Buildings. There are also buildings of lesser age but architectural interest as examples of an attempt to recreate a rural style with local materials. The concept of this Policy was well supported by the village in the Stage Two survey, with almost 80% voting in favour (36).

A Heritage Report (48) has been prepared as part of the Neighbourhood Planning Process, with evidence and assessments relating to a provisional list of heritage assets of local importance. This is offered as input to the Local Authority in its task of preparing a final list; the document has already been the subject of local consultation and review, and correspondence and minutes of meetings with householders will also be supplied. It lists a total of 26 potential assets, mainly houses but including the Mission Hall, the Springhead Pub, the Cartshed, the village telephone box, the bridge at the bottom end of the Mill Pond, and Silver Street; the last of these consists of the “street” itself, not the cottages along it (although the cottages are part of the context for the street as well as for several Listed Buildings in the area).

Summary of Intent for Policy HE2

In the words of Historic England’s Guidance Note on Local Listing, this list of locally important assets will provide a “sound, consistent and accountable means of identifying local heritage assets to the benefit of good strategic planning ... and to the benefit of owners and developers wishing to fully understand local development opportunities and constraints”. This list with the evidence used to assemble it will provide better information than the Conservation Area appraisal on its own can do.
SECTION 4.5 - HOUSING AND PLANNING

Strategic Objective
To retain the rural character of the village as a discrete settlement surrounded by open fields and separated from Preston.

To ensure further development in the village is proportionate in scale and respects the setting within a nationally designated landscape (AONB).

To ensure the conservation area in Sutton Poyntz is better conserved, reflecting its statutory planning purpose (50) and its distinctive character areas.

Introduction
Sutton Poyntz is a relatively small settlement. It lies within the Dorset Area of Outstanding Natural Beauty (AONB) and has a Defined Development Boundary which preserves the green gap between Preston and Sutton Poyntz. The village is covered in its entirety by a conservation area. These factors constrain development opportunities within the village.

The Neighbourhood Plan area does not contain any existing allocation sites in the Local Plan (14) – although there are substantial sites nearby, in and around Weymouth.

This Neighbourhood Plan does not allocate particular sites for new housing development; however, incremental growth is desirable and there is an expectation that new dwellings will be built over the plan period at the same rate as the last twenty years. This is most likely to be delivered through infill development or increasing density on some sites within the existing Defined Development Boundary.

The possibility of small-scale exceptions is noted, as long as they match the requirements of Local Plan (14) policy HOUS2 (on rural exception sites), subject to sustainability.

Should the rate of development in the Neighbourhood Plan area fall significantly behind that expected, the intention would be to review the Neighbourhood Plan to explore other options in consultation with the Local Authority.
POLICY H&P1 – BUILDING STYLE AND DESIGN

Development will seek to preserve or enhance the Conservation Area, taking account of traditional building style or materials.

New development within the village should take account of nearby building style and materials, as described for five defined character areas which have their own design guidance described in the accompanying text below. The five character areas, shown on Map M-PAC1, are:

- Historic Core
- West Side
- Plaisters Lane North
- Gateway
- Puddledock South

New development and extensions or alterations to existing buildings will not detract from the AONB.

Development will be supported which enhances the village at locations where existing development has not been in a style that is complementary or sympathetic to the area’s traditional building styles.

National Planning Policy Framework (13) paragraphs 58, 60, 61 and 64 apply
Local Plan Policy ENV 1 and 12 (14) apply.

Justification for Policy H&P1
A Place Appraisal (1) has been produced as part of the process of creating this Neighbourhood Plan which defines these five character areas and describes their distinctive features. The Stage Two survey gave significant support for new development taking greater account of nearby building design (36). This significant community response underlines Policy H&P1 and emphasises the important role of this measure in meeting the aspirations of the community to improve and enhance their environment.

Dorset AONB 2014-19 Management Plan Policy framework 4A.1 (35) states that the sensitive siting and design of development is vital to conserve and enhance the landscape and scenic beauty of the AONB.

Summary of Intent for Policy H&P1
The above policy aims to ensure that all future building adds to the character of Sutton Poyntz, does not detract from the AONB and ensures that the new properties are of a character appropriate to their surroundings.
Village Character Areas

The Sutton Poyntz Place Appraisal (1) identifies five character areas within the village, these are:

- **The Historic Core**
  Much of the village’s character is derived from the historic core. Future development should match the existing styles, scales and building materials, rather than introducing taller buildings, non-traditional materials, wider roads and pavements, and should avoid obscuring important key views or extending into the valley farmland beyond the stream banks. Protecting the aesthetic and architectural quality of the historic core is important in protecting the overall character of the village.

- **The West Side**
  The West side benefits from proximity to the historic core but has a more diverse character with a confusion of styles and building materials. Several cul-de-sacs, with wide roads and pavements, strike a discordant note. Future development that better matched the historic core would enhance the overall character of the village and strengthen the sense of community.

- **Plaisters Lane North**
  The northerly section of Plaisters Lane offers a mixture of styles, with several houses of recognised architectural merit (48), although the plots are larger and buildings more widely spaced than in the historic core. Any future development should be sympathetic to these important pre-war designs, while retaining established and viable trees and be consistent with the country lane feel.
• Gateway
Gateway marks the transition between Preston and Sutton Poyntz. The narrow lane descending into the village used to offer a striking vista of the South Dorset Ridgeway and the White Horse. Recent development, while employing traditional materials, has compromised these views and made the transition more problematic. Future development that retains the narrow lane, and offering the same high design standards, would help maintain the distinct identity of the village and protect its value to the wider community.

• Puddledock South
Puddledock South abuts Preston but does not offer the clear transition or views provided by Gateway. Development of what was previously a farm track happened quite quickly, and features pavements and wide roads. There is no sense of a narrow village lane connecting Weymouth with the countryside. Any future development should enhance the character of the area and adopt the design standards found in the historic core.

Design Guidance

While the village is within a Conservation Area, there is no narrative or management plan for the Conservation Area and so policy H&P 1 aims to give guidance on style and design to aid future planning decisions.

In general, any developments must be sympathetic to the local character and history of the village, including the built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities). Whatever the location, good quality design and sympathetic use of materials are essential.

Our policy is for new building to reflect surrounding properties where the design enhances the area. Where surrounding houses are not of traditional or sympathetic design they should reflect the older properties in the Historic Core and as described in the Place Appraisal. This notes that older dwellings are built mainly of Portland stone rubble and occasionally local stone, under both thatch and slate roofs. The use of these materials would be encouraged on new houses, as appropriate and depending upon their location.

More recent buildings have used guillotined Purbeck stone, in some cases with dressed quoins and corbels. We would encourage the use of similar materials in new homes where possible. We would also support the use of mellow or soft red brick, which appears on old as well as new properties, but not harsh red brick.

On some new properties, effective use has been made of reclaimed materials (e.g. tiles) suggesting their former agricultural purpose and this approach is to be encouraged. Reconstituted or sawn stone would be discouraged because of its regular appearance and guillotined hand dressed stone would be preferable to tumbled stone with rounded edges. Roof pitches and heights should be sympathetic to nearby properties and sit comfortably in the existing street or lane scene. Flat roof developments, including extensions, will be discouraged.
Stone boundary walls appear throughout the character areas and their appearance is important. The traditional style known as ‘Cock and Hen’ with brushed out lime pointing will be supported for new developments. Red brick as a main walling material would be discouraged, as will brick copings. Tree planting schemes that are sensitive to views will be encouraged to soften new development boundaries.

The Dorset AONB 2014-19 Management Plan Policy Framework 4A.1 (35) states that the sensitive siting and design of development is vital to conserve and enhance the landscape and scenic beauty of the AONB. The above guidance aims to ensure this for all future building works, including extensions and alterations, thereby adding to the character of the village and not detracting from the AONB (34).

In summary, building works are to be of a nature and character appropriate to their surroundings. All aspects of the design of new properties should reflect the character of existing dwellings, streets and lanes. Preference will be given to designs and materials that resonate with the style of the older more traditional properties in the village (1), while at the same time taking advantage of modern building methods and energy efficient materials.

**POLICY H&P2 HOUSING NUMBERS AND SIZE**

New residential development within the defined development boundary will normally be supported.

There is a preference for smaller (2 or 3 bedroom) homes to meet local needs, by giving more residents the option to downsize whilst remaining in the neighbourhood.

*National Planning Policy Framework (13) paragraphs 16,47,50,53 apply*

*Local Plan Policy SUS 2 and 5 and HOUS 3 (14) apply*

**Justification for Policy H&P2**

This Neighbourhood Plan is not an allocation plan. It looks to policies in the Local Plan to deliver new housing. However, over the last 20 years approximately 20 new homes have been built in the village and so a similar number seems appropriate.

The Stage Two survey (36) showed substantial support for between 10 and 20 new homes in the village. National planning guidance is that neighbourhood plans should support more new homes and so our expectation reflects this - using the higher end of the figures suggested by the survey.

The village has limited public transport, employment opportunities within the village are small and most residents rely on their own transport to get to work and access public services. Sustainability (32, 34) is therefore an area of concern and a reason behind the modest numbers being proposed. If we can maintain the historical rate of around one property per annum this should not create sustainability issues.

New housing involving replacement of existing dwellings to provide smaller scale housing, if necessary at higher density will be supported, as will houses of a higher specification suitable as retirement homes that will encourage residents to downsize,
releasing larger homes for families. This includes change of use and development of gardens where appropriate.

**Summary of Intent for Policy H&P2**

This policy aims to ensure that any development is incremental and this is expected to happen through infill and possibly increased density.

This development will be delivered through Local Plan policies, which H&P2 supports. Should the rate of development fall significantly behind that expected, the intention would be to review the Neighbourhood Plan to explore other options in consultation with the Local Authority.

**POLICY H&P3 – KEY VIEWS**

The following views into, out of and within the village are designated as Key Views:

1. The iconic view of the village’s Mill Pond
2. From the Mill Pond towards White Horse Hill
3. From the Sutton Poyntz stone towards the junction outside the Cart Shed
4. North from the path below Chalbury
5. From the Beacon below West Hill
6. From Margaret’s Seat above Spring Bottom
7. From Winslow

New development should respect the key views. Any development which would obstruct or significantly detract from them will not be supported.

*National Planning Policy Framework (13) paragraph 115 applies
Local Plan Policy ENV 1 (14) applies*

**Justification for Policy H&P3**

The village sits under the South Dorset Ridgeway and its setting within the landscape is a key part of its character. There are several iconic views within the historic village and outward towards the much-loved nearby hills.

Dorset AONB 2014-19 Management Plan Policy framework 4A.1 (35) states that the sensitive siting and design of development is vital to conserve and enhance the landscape and the scenic beauty of the AONB.

An independent survey (38) identifying important views was carried out and which identified 15 views that might be suitable for designation. These were reviewed by the Housing and Planning Sub-Group and ratified by the Steering Group who recognised that in a village of the size of Sutton Poyntz, 15 views were probably excessive and so only the iconic views were selected. These 7 views are shown below:
Photographs and description of Key Views

View 1 the iconic view of the village’s Mill Pond. This view is considered important as it captures the essence of the village; it is the classic picture postcard view which includes the key characteristics of Sutton Poyntz. No development that detracts from this vista will be allowed.
View 2 from the Mill Pond towards White Horse Hill, the view from the heart of the village. This view gives a feeling of openness and connection to the hills beyond the village and is important as a backdrop to the Mill Pond which is the heart of the village. Any development in this area would detract from the centre of the village and remove its rural feel, this field and beyond towards White Horse Hill should remain as open space.

View 3 the sweep down from the Sutton Poyntz stone towards the junction outside the Cart Shed. The view of the South Dorset Ridgeway and White Horse Hill has been partially obscured by infill development in the gateway to the village. Any future development will retain the narrow lane and protect the residual views.

View 4 North from path below Chalbury. This view is important because it is framed by the houses on the hill running up Plaisters Lane. Any development in and around those existing houses should not stand out from the neighbouring properties and should not detract from this view.
View 7 From Winslow on the footpath just on village boundary. This was seen as a particularly important view by the independent assessor. It encompasses the whole village and sets it in the landscape with the South Dorset Ridgeway beyond. Again, any development that can be seen from this point must enhance the AONB and reflect the traditional building styles within the village.

The plan recognises that some developments can enhance key views so the policy is not to stop any development on land visible from the identified viewpoints but to ensure any development enhances the existing vistas.

Summary of Intent of Policy H&P3
Identifying these important views means that those views can be protected from unsympathetic development. The AONB policies do not preclude development within the sweep of existing views; they state that any development should be complementary. This policy is to ensure that these seven important views are preserved and any development does not detract from them. It recognises, in line with AONB policy, that some development can improve key views.

**Policy H&P 4 FLOOD PREVENTION**

H&P4.1 New developments will be supported which make substantive use of porous surfaces and where it is demonstrated that the volume of surface water run-off onto adjacent land and roads is either at a lower or equal level to that prior to the development.

H&P4.2 New development proposals must include information which explains how surface water run-off will be reduced or mitigated, for example by the inclusion of soakaways or porous driveways such that surface water run-off will be absorbed by the natural water course system on the site (42)

*National Policy Planning Framework (13) paragraphs 94, 99,100,102,103 apply. Local Plan Policy (14) ENV apply*

**Justification for Policy H&P 4**

Flooding events have not been uncommon in the past, major flooding events have occurred in Sutton Poyntz and Preston in 1955, 1977, 1979, 1983, 1993 and 2003. Most recently in 2012 and 2014, after a period of very heavy rainfall, the River Jordan overtopped its banks and resulted in the flooding of cottages adjacent to the village pond. Flooding of gardens and the road at the junction of Puddledock Lane and Sutton Road and opposite Old Bincombe Lane is also a common occurrence in periods of high rainfall.

The steep hills to the north of Sutton Poyntz mean that after only short periods of intense rain the increase in the flow of the River Jordan leads to scouring of the chalk river bed and loss of flora and fauna. For example, a mass of Water Crowfoot once thrived in the river opposite the Cartshed and provided habitat for invertebrates as well as food and cover for water voles which had burrows in the banks of Osmington Brook. The Water Crowfoot has declined significantly which also coincided with the end of reported sightings of water vole in the stream in the immediate area and along the Osmington Brook. The foul sewer in Plaisters Lane has also suffered uncontrolled overflows in the past onto the highway and private property. Despite the excess overflow outlet into the River Jordan the sewer also overflows in the valley leading to Osmington as the system is unable to cope with both foul effluent and surface water run-off present in the foul sewer.

The Environment Agency identified much of Sutton Poyntz’s historic core to be at a high risk of flooding. To improve the position, it therefore undertook extensive work designated the “River Jordan Alleviation Scheme”. This work near Fisherbridge, “aims to provide flood protection to a maximum 1 in 100-year standard of protection.” (47)
The UK Climate Change Projections (UKCP09) state that “River flood flows are projected to increase by 20% by 2050, and 30% by the 2080s. The increase in flows are likely to be seasonal, with an increase in winter of up to 20%, but a decrease for the rest of the year, particularly in the summer where flows could be reduced by 50 to 80% in some instances by 2050”. Extreme rainfall intensity is likely to increase by 10% by the 2050’s and 20% by the 2080’s” (41). As a result, river flows, and hence heights, will be more volatile in the future and there is the potential for an increase in the number of dwellings at risk of flooding. To help avoid this and align with the Environment Agency projection of a 1 in 100 year event an increase in the amount of surface water runoff arising from within the village should be avoided and ideally reduced. Hence, where practicable, steps need to be taken to ensure that for new developments surface water is retained and managed on site before entering the water course (42). In a recent survey (11) over 90% of residents supported a policy whereby all new developments will be required to be planned to minimise additional surface water runoff.

Summary of Intent for Policy H&P 4
Since the risk of flooding is already high and is predicted to get worse a policy is required that adopts pro-active measures that ensure that surface water run-off from a developed or re-developed site onto the surrounding land and roadways is no greater than from the undeveloped site (42). Due to the expected periods of heavy rainfall in the future because of climate change, it is important to utilise measures to retain a greater volume of surface water on-site rather than simply diverting it towards neighbouring land or homes and therefore in the short term to reduce run-off wherever possible. The policy is intended to apply to all development proposals in the Neighbourhood Plan area as any potential surface water run-off is likely to flow into the higher risk flood zones given the local topography.

MAP H&P 4: FLOOD RISK MAP FOR SUTTON POYNTZ

Key: Dark Blue Shaded Area = High Risk (Environment Agency Zone 3); Light Blue Shaded Area = Low to Medium Risk (Environment Agency Zone 2)
4.6 SPORTS AND RECREATION

Strategic Objective
Sustain and improve those community facilities and assets which create community integration and a better quality of life.

Introduction
Sutton Poyntz is a small but vibrant community which has many active interest groups (history, arts, social, etc.) as well as community centred events such as the biennial Sutton Poyntz Street Fayre and monthly coffee mornings. Residents recognise the real benefits that this brings in terms of community cohesion but also appreciate the challenges and areas for improvement that exist (1, 10). For example, there are no indoor or outdoor sports facilities without travelling into Weymouth or Dorchester. The policies in this plan seek to address these issues relative to future development and deal specifically with:

- Protecting those assets considered important to the community to prevent their loss to residential development.
- Support for the development of facilities that will benefit the whole community and particularly younger people who are vital to our future sustainability.
- Identification of a suitable location for a children’s play area.

Specific community aspirations have been identified regarding assets of community value, interim arrangements for a children’s play area, history/nature trails and recreational use of the public rights of way, better utilisation of the waterworks museum and provision of additional community facilities.

POLICY SR1 – PROTECTION OF COMMUNITY ASSETS

Development proposals which would result in the loss of the following buildings as community assets in Sutton Poyntz will not normally be permitted.

- The Mission Hall
- Springhead Public House

Change of use of these facilities will only be permitted in exceptional circumstances where it has been clearly demonstrated that:
  - there is no local need for them or they are no longer viable; and
  - no appropriate alternative community use is needed or would be viable.

Proposals designed to modernise or extend community facilities for public use, including increasing their capacity, will generally be supported.

*National Policy Planning Framework (13) paragraphs 69, 70 apply.*
*Local Plan Policies (14) COM 2 and 3 apply.*

Justification for Policy SR1
A recent consultation exercise (11, 36) has identified the above facilities as being of significant value to the community, in each case with over 90% support. These
facilities have received consistent recognition as being vital to the sustainability of the community in previous surveys (10) and provide key social and amenity benefits to all. Loss of any of these facilities would have a significant detrimental impact on the community and, in many cases, create social isolation. Strong support has also been expressed for the community value of the Waterworks Museum, however, after consultation with Wessex Water it was felt that formal designation as an asset of community value within an operational water extraction site would be inappropriate. However, Wessex Water is urged to work with the village to maintain the museum, possibly by employing community volunteers.

Summary of Intent for Policy SR1
The above policy aims to recognise those facilities of recreational value to the community that are of importance, such that their loss would have a significant detrimental impact on the sustainability of the village and the social well-being of residents. These sites are identified as priorities for protection from planning applications that propose a change of use or do not seek to develop them for the benefit of community provision.

POLICY SR2 – ENHANCEMENT OF COMMUNITY SPORTS AND RECREATION FACILITIES.

Proposals to use land within, or adjacent to the historic centre of, the village as a public children’s play area will be supported, unless they conflict with other Local Plan or Neighbourhood Plan policies.

National Policy Planning Framework (13) paragraph 73 applies
Local Plan Policy (14) COM 4 applies

Justification for Policy SR2
The mixed opinions expressed in the first public consultation regarding a sports field and a children’s play area (10) resulted in specific questions being asked in the Stage Two Survey (11). The results (36) show public support for some facilities and not for others, and the former have been incorporated into this Neighbourhood Plan. A small majority favoured the provision of a children’s play area with several respondents identifying the Springhead Pub garden as a logical location. There was also a good level of support for a village green and community allotments and these proposed new facilities have been included below as aspirations for the community.

Summary of Intent for Policy SR2
Concerns relating to the lack of provision of facilities for younger people have been a consistent theme in earlier village surveys (10, 19) and the need to attract families to the village is recognised. The lack of recreation facilities, particularly for younger children is a disincentive for families with children to choose to live in the village and needs to be addressed in terms of community sustainability. It has been suggested that the use of the small play facility at the Springhead Pub be adopted subject to agreement with the tenants and owners and this would also provide a suitable area for a longer term permanent public facility.
SECTION 5: COMMUNITY ASPIRATIONS

Several aspirations emerged from the Neighbourhood Plan public consultation surveys in October 2016 (10) and December 2017/January 2018 (11) which do not relate directly to land use and development aspects of planning. These cannot therefore form policies, but are included as action points for the community.

5.1 Community Aspirations in Relation to Biodiversity and the Natural Environment

There is considerable support for tree preservation in the community (11, 36). Tree related issues cannot form part of planning policy, but it is important that these concerns are understood by third parties, including public and regulatory bodies. Within the conservation area, notification of tree work is legally required subject to exemption and the local authority has an option to consult with the local community. Recent financial pressures (2017) have caused this option to be withdrawn. The Local Planning Authority can place Tree Preservation Orders on individual, groups or areas of trees, although relatively few exist in the Neighbourhood Plan area and some of these relate to non-native species of an inappropriate size for the location. A priority will be to seek Tree Preservation Orders on those trees located in Local Green Spaces. Where the loss of trees is unavoidable, residents, businesses and landowners should seek to replace them with suitable trees of the same species or in keeping with established trees in the immediate locality. These aspirations are represented as action points AP 5.1.1 to AP 5.1.4 below. Recent research (5) provides evidence that the exposure to nature, and the natural environment, and involvement in community based green projects has a beneficial effect on mental and physical wellbeing and helps to reduce barriers to social isolation. Building on the existing co-operation between Wessex Water and the Sutton Poyntz Biodiversity Group, such eco-based community projects will continue to be developed by providing appropriate guidance and resource to landowners, residents and others by agreement. These aspirations are represented as action points AP 5.1.5 and 5.1.6 below.

| AP 5.1.1 | When planting trees and hedges in private gardens residents are encouraged to plant indigenous native species with due regard to location and long term management. |
| AP 5.1.2 | Where a significant tree is felled due to it being diseased, dying or dangerous, at least one replacement will be planted in a suitable location and will be of a species appropriate to the local area. |
| AP 5.1.3 | Tree Preservation Orders will be sought as appropriate on trees located in designated areas of green space. |
| AP 5.1.4 | The village will be consulted on all tree applications, notifications and planning applications where trees, orchards and hedges may be adversely affected. |
| AP 5.1.5 | Seek opportunities to work, through appropriate community groups such as the Sutton Poyntz Biodiversity Group, with residents and a wider group of landowners on community biodiversity projects and the promotion of biodiversity knowledge and awareness. These will build upon well-established community involvement projects such as the monthly Garden Bird Watch (17). |
| AP 5.1.6 | The Sutton Poyntz Biodiversity Group to review the 2009 Biodiversity report and include a section on guidance to residents on pro-active measures that could be adopted in gardens and homes to improve habitat and encourage wildlife as well as encouraging farmers and landowners to adopt wildlife friendly methods. |
5.2 Community Aspirations in relation to Employment, Business and Tourism

A small majority (54%) were in favour of a village shop selling “general store” items, fruit and vegetables, locally sourced arts and crafts and incorporating a tea shop (36). However, given the proximity of two general stores to the village, it seems unlikely that an additional retail outlet in Sutton Poyntz would prove commercially viable. It would, however, be appropriate to pursue options for inclusion of a small outlet in existing used or under-used premises with a limited range of non-perishable or local produce and run by volunteers, which might develop over time.

Of the business development options provided in the community survey (11), the only one receiving majority support was home-based working (36). It is believed that the current standard of mobile phone and internet coverage, which is essential to effective home-working, is sufficient to make this sustainable.

The history of the village, together with its literary associations and surrounding countryside with a network of public rights of way (1, 25) provide the basis for sympathetic tourism. The Waterworks Museum is under-utilised, largely due to problems of staffing, and provides an opportunity for resourcing through community volunteers - as part of an arrangement with Wessex Water. Possibilities exist for incorporating other uses, such as a café, information point and arts and crafts exhibition area. The community will work together to achieve the following aspirations:

5.3 Community Aspirations in relation to Getting Around

Several transport related concerns were raised following the Neighbourhood Plan public consultation surveys in October 2016 (10) and December 2017/January 2018 (11) which do not relate directly to land use and development aspects of planning and

| AP 5.2.1 - Provision of a Village Shop. A small majority of people support the provision of a village shop and this needs to be balanced against the views of many in the community that this is not economically viable. It is therefore appropriate that opportunities are sought to establish a small retail outlet, initially on a limited basis within existing premises and staffed by community volunteers for example a pop-up shop in the Springhead Pub or Waterworks Museum. |
| AP 5.2.2 - Encourage the development of small scale business through support for home working. We will liaise with third parties to help improve the viability of low key home working*, for example through further improvements in communications. |
| *Any business activity will not generate a regular flow of visiting clients or parked vehicles outside or near the premises, will not result in a building frontage which has a shop front style window or features, and will not involve the installation of business signage which is visible from outside the premises. |
| AP 5.2.3 - Support for Local Employment. We will co-operate with local businesses and residents to assist the creation of additional jobs through appropriate business expansion. We are mindful of the need to ensure that the infrastructure can accommodate such expansion including, for example, better public transport services. |
| AP 5.2.4 - Small Scale Tourism. Promote small-scale non-commercial tourism through the provision of information on history, literary connections and nature within Sutton Poyntz. We will work with local businesses to enhance such tourist facilities, for example through sponsorship of information leaflets, guided walks, extended opening of the Waterworks Museum and greater use of the Springhead Pub as a drop-in point. |
are designated as community aspirations for future action that complement the Neighbourhood Plan.

The public bus service is vital to several residents for access to doctors, shops, and other services in addition to providing essential links to the wider transport network and the recent decline in service levels have had a detrimental impact. The need to retain and expand the village bus service has been a consistent message in the last two village surveys (19, 10) and these are reflected in these community aspirations.

Public rights of way are a key feature that give Sutton Poyntz a sense of place (1) and their preservation, maintenance and access in the face of modern day pressures are a key priority for the community (10, 25). Some specific road safety issues not directly related to planning policy have been identified as of concern to the community (1, 8, 10, 36, 19). The community through its various representative bodies is to proactively co-operate and collaborate with regulatory, public, commercial and other third parties in seeking to develop transport provision that aligns with the transport objective stated in the Sutton Poyntz Neighbourhood Plan. Specific issues identified by the community to be addressed include:

**AP 5.3.1 - Public Bus Services**
- AP 5.3.1.1 Work with commercial bus operators, and other service providers, to sustain and improve a village bus service and retain other local services such as the Preston – Weymouth and Preston-Dorchester/Poole services.
- AP 5.3.1.2 As a community promote the use of the village bus service by residents and visitors to reduce dependency on the private motor car and the associated problems of pollution and congestion.

**AP 5.3.2 - Public Rights of Way**
- AP 5.3.2.1 To work with the Dorset County Council in seeking a sustainable solution to maintaining safe open access along the Puddledock Lane public footpath.
- AP 5.3.2.2 Establish a community monitoring and reporting scheme to ensure that public rights of way are maintained in accessible condition and are kept clearly signposted.

**AP 5.3.3 - Road Safety and Congestion**
- AP 5.3.3.1 To work with the Dorset County Council to resolve current congestion issues at the south end of Sutton Road between Winslow Road and Preston Road, for example through the provision of vehicle passing areas and to seek measures to mitigate the hazards of the blind bend on Plaisters Lane below Wyndings.
- AP 5.3.3.2 To co-operate with businesses to address issues related to on-street parking and congestion, such as those areas around the village pond and the bus stop without recourse to road markings or similar obtrusive measures. Sufficient access for emergency and public service vehicles needs to be a priority.
- AP 5.3.3.3 An assessment of non-obtrusive measures such as psychological traffic calming (21) and a review of vehicle monitoring data (20) is undertaken to seek a reduction in the speed of traffic along roads.
5.4 Community Aspirations in relation to Heritage

The appraisal for the Sutton Poyntz Conservation Area (30), first written by the Borough Council in 1972 and extended in 1979 and 2000, is rather brief and lacking in detail; equivalent documents for other Conservation Areas in Dorset contain much more detail on the features of the village that are of greatest value. The additional information provided is of value to the Local Authority, to householders, and to developers. A revised document should give much greater clarity on what features of the Conservation Area are of real significance, and therefore what genuinely needs protection. Some of the additional information is now available in the Place Appraisal (1) and the Heritage Assessment Report (48); in addition, the Sutton Poyntz History Group has collected information that may be useful and would be keen to be involved.

The provision of better information on the village’s heritage was a repeated request by residents in the Stage 1 Survey. The village’s History Group has been intending to create the text for a new History Display for the village; funding may already be available.

- AP 5.4.1 – We will work with the Borough Council to try to find a way of producing a revised Appraisal document for the Sutton Poyntz Conservation Area.
- AP 5.4.2 – We will seek to provide more information within the village on the village’s heritage and history, for the benefit of residents and visitors.

5.5 Community Aspirations in relation to Housing and Planning

A policy on flood mitigation measures exists for new and existing developments where planning permission is required. It cannot be applied however to those small scale works such as creating impervious driveways which do not require planning permission, but which can add significantly to the volume of surface water run-off into the catchment area at times of high rainfall. It is therefore important to inform residents of the impact of such changes and provide guidance as to simple actions that can be taken to alleviate the problems created by such works. Run-off from the chalk escarpment can also be increased by land management issues such as the removal of gorse scrub. A balanced approach to such management practice needs to be adopted whereby consideration is given to the effect on groundwater retention by the removal of plant root systems.

- AP 5.5.1 To promote information and advice to residents which encourage the use of measures to reduce surface water runoff from properties such as by creating porous driveways and taking steps to retain and manage surface water on-site, such as the use of soakaways.
- AP 5.5.2 To engage with Natural England and other third parties to ensure that consideration of water retention and run-off impact is considered in land management practices.
5.6 Community Aspirations in Relation to Sports and Recreation

Several recreation-related issues were raised following the public consultation surveys (10, 11) that represent community aspirations. Several public facilities were regarded as important to the sustainability of the community and should be protected by nomination as Assets of Community Value (ACV). The provision of a children’s play area is supported by the community (36). The network of public rights of way (25) are a key feature that give Sutton Poyntz a sense of place (1) and could be incorporated into a series of guided walks centred on the village that promote recreational interest in the history, ecology and literary connections within the area (10). The Waterworks museum is under used largely due to problems of staffing and so provides an opportunity for resourcing through community volunteers as part of an arrangement with Wessex Water plc which could enable a broader use of the facilities for other community purposes, such as a café, local produce sales, art exhibitions, etc.

AP 5.6.1 – Nomination of Assets of Community Value
The following facilities should be registered as Assets of Community value with the Local Authority under the provisions of the Localism Act 2011.
- The Mill Pond
- The Mission Hall
- Springhead Public House
- Veterans Wood
- Area of Land in front of 97 Sutton Road

If any of these facilities are offered for sale, the community shall undertake a public consultation to decide whether to exercise the right to bid.

AP 5.6.2 – Provision of a Children’s Play Area
To explore the provision of a children’s play facility in the short term in co-operation with the Springhead Pub to assist the delivery of Policy SR2.

AP 5.6.3 – Visitor Guides
Develop guides for local history, nature, literature trails and consider provision of personal guidance through the services of registered local volunteers.

AP 5.6.4 – Promote the Use of Public Rights of Way for Recreational Purposes
- AP 5.6.4.1 Provide maps and guides to promote the use of the network of public rights of way and incorporate these into themed walk guides.
- AP 5.6.4.2 To identify suitable cycle routes in the area and link these into the National Cycle Network

AP 5.6.5 – Waterworks Museum: Promote with Wessex Water plc extended opening of the Waterworks Museum through community volunteers and greater community use of the visitor area facilities, for example as a small café, outlet for local arts and crafts.

AP 5.6.6 – Provision of Community Allotments and Village Green. Suitable sites be sought for the lease or purchase of land to provide a village green and community allotments. Possible sites include land immediately to the north of Mission Hall Lane (currently owned by Wessex Water) and adjoining land in private ownership to the east of Plaisters Lane.

ANNEX

MAPS AND OTHER SUPPORTING INFORMATION RELEVANT TO POLICIES ON BIODIVERSITY AND THE NATURAL ENVIRONMENT

Biodiversity maps

M-BNE2.1: Land Classification and Priority Habitat Type
UK NATIONAL BIODIVERSITY ACTION PLAN PRIORITY HABITAT
(Habitat identified as being present in the Neighbourhood Plan Area – examples and locations are outlined in the Priority Species report (4) and the Hedgerow survey (3))

- Ponds and Running Water
- Traditional Orchards
- Wet Woodland
- Hedgerows and boundary features
- Neutral grassland – lowland meadows
- Roadside verges
- Broadleaved Woodland and Scrub
- Calcareous Grassland
- Arable field margins
- Buildings

M-BNE2.2: Important Biodiversity Habitat/Hedgerow Survey

Note: Reference should be made to the hedgerow survey 2017 (3) for a detailed description of each hedgerow and the qualifying features.
Map M-BNE 2.3: List of Priority Biodiversity Species within the Sutton Poyntz Neighbourhood Plan Area.

This refers to species of cause for concern, in decline or threatened according to the UK National Biodiversity Action Plan (NBAP) 2007 schedule and BoCC 4 Red Data list of birds 2015.

The Map reference is colour coded to represent the commonality of local sightings as follows:
- Green = Frequently observed each season:
- Amber = Variable seasonal observations:
- Red = Occasional seasonal observations. A more detailed description is provided at reference 4 in Section 6 of this document.

**BNE 2.4.** Extract from the Lawton Report 2010 (2) ‘Making space for nature’

### 2.2.1 What is an ecological network?

*Much of England’s wildlife is now restricted to certain places, our wildlife sites, consisting largely of semi-natural habitats moulded by millennia of human-use. These sites are essential for the survival of many plants and animals and will remain important even if the species and habitats within them change. Surviving in small, isolated sites is, however, difficult for many species, and often impossible in the longer term, because they rarely contain the level of resources or the diversity of habitats needed to support sustainable populations. However, an alternative is to designate a suite of high quality sites which collectively contain the range and area of habitats that species require… and allow species to move between them. It is this network of core sites connected by buffer zones, wildlife corridors and smaller but still wildlife-rich sites that are important in their own right and can also act as ‘stepping stones’ that we call an ecological network. ‘Wildlife corridors’ do not have to be continuous, physical connections: a mosaic of mixed land use, for example, may be all that is needed – it is the permeability of the landscape to species that matters.*
